We are doing on the Database connecting this week and we meet some troubles:

Database Troubleshooting: The application is experiencing a java. lang.NoClassDefFoundError when attempting to access ManagementFactory. Investigate the root cause of this issue and implement a fix to ensure that the application can properly access the database.

Programmer: Hang Li, Hi Leung

Also, We need to fix the search bar functionality: The search bar is currently not working and causes the program to crash when attempting to search. Investigate and resolve this issue to ensure that users are able to search for information without issues.

Programmer: Yifeng Zhang, Yujia Zuo

Tasks:

Search Bar:

- a. Identify the cause of the crash when searching
- b. Implement a fix for the search bar
- c. Test and verify that the search functionality is working as expected

Database Troubleshooting:

- a. Investigate the cause of the NoClassDefFoundError
- b. Implement a fix for the database issue
- c. Test and verify that the database is accessible and functional

Priority:

Database Troubleshooting: High priority

Fix search bar functionality: Medium priority
